

NEONATAL INCUBATOR

—

TARGET CUSTOMER/USER

Hospital Administrators/Purchasing Managers

PROBLEMS WITH CURRENT SOLUTIONS

Inaccurate or Inconsistent Environmental Control:

- Temperature Fluctuations

- Humidity Control Issues

- Oxygen Delivery

Infection Control:

- Cleaning and Disinfection

- Air Filtration

Features and Functionalities Required:

Precise Temperature Control:

- * Ability to maintain a stable and accurate temperature within a narrow range.
- * Temperature monitoring and display.

Humidity Control:

- * Ability to maintain specific humidity levels.
- * Humidity monitoring and display.

Oxygen Control:

- * Ability to administer and monitor oxygen levels.
- * Oxygen concentration display.

Air Circulation and Filtration:

- * HEPA filtration to remove airborne particles and pathogens.
- * Even and gentle air circulation.

Monitoring and Alarms:

- * Continuous monitoring of vital signs (temperature, humidity, oxygen).
- * Audible and visual alarms for deviations from set parameters.
- * Weight scale integration.

Data Logging and Connectivity:

- * Ability to record and store data.
- * Connectivity for remote monitoring and data transfer.

Mobility:

- * Wheels with locking mechanisms for easy transport.

Values and Benefits They Are Expecting

Improved Infant Survival Rates

Reduced Morbidity

Enhanced Infant Comfort and Well-being

Increased Efficiency for Healthcare Professionals

Reduced Risk of Infection

Ease of Use and Maintenance

Price They Are
Willing to Pay
